

To Whom It May Concern,

I would like to recommend Ron Shosh and his team of architects at Amundsen Associates to you for your project. Having worked closely with them for over a year on our new Masterson Place Project has given me first - hand experience with their quality of work. Masterson Place is our hospitality home, much like a hotel. When we decided to embark on building a new facility we chose Amundsen Associates as our architects.

Amundsen Associates have done an excellent job of designing our new facility (and providing detailed schematic drawings), taking care of all other companies involved, including the City of Casper and utility companies. The design of our new Masterson Place is beautiful. It includes a lobby with a two-sided fireplace, a reception desk and a Community Room on the first floor. The building will be three stories tall with a total of 16 guest rooms that will each have a kitchenette in addition to the bedroom area and bathroom. Our Foundation offices will be on the second floor of this building as well.

The team at Amundsen Associates is very detail-oriented, making sure that everything we wanted was included. If we had a request for something that was unfamiliar to them they made sure that they researched it and found several options for our consideration.

Everyone at Amundsen Associates that I have worked with has been professional and knowledgeable, always returning my phone calls in a timely manner. In short, they do an outstanding job and I highly recommend them.

Sincerely,

Caryn Luberto
Executive Director
